

A search of the AbilityOne online catalog ([www.abilityone.gov](http://www.abilityone.gov)) indicated that four of the product categories being proposed today (Air Fresheners and Deodorizers, Blast Media, Ink – Printer Toner, and Floor Coverings ( non-carpet)) are available through the AbilityOne program.

While none of the specific within these product categories are identified in the AbilityOne online catalog as being biobased products, it is possible that biobased products are available or will be available in the future. Also, because additional categories of products are frequently added to the AbilityOne program, it is possible that biobased products within other product categories being proposed for designation today may be available through the AbilityOne program in the future. Procurement of biobased products through the AbilityOne program would further the objectives of both the AbilityOne program and the BioPreferred program.
